

Genoplev innovationskonferencen

Med deltagelsen på innovationskonferencen "Innovation X" i maj holdt KASK Innovation en midtvejsevent, hvor de tre partnere gjorde status over erfaringerne med det grænseoverskridende innovationssamarbejde. Nu kan du se videoer fra konferencen på www.kask-innovation.eu

Innovation X arrangementet var en temadag sammensat af forskellige spændende foredrag og workshops. KASK Innovation bidrog med et eftermiddagsarrangement bestående af foredrag med innovationschef og leder af Idéklinikken Kjeld Lisby, Christoffer Ellingsen MSc, E.E. fra Oslo Universitetssykehus, Kim Hamli, Induct Software og Kristian Siverbo fra Sahlgrenska Universitetssjukhuset.

Under titlen "Innovation og kreativitet i sundhedssektoren - udviklingsaktiviteter båret af de ansatte i sundhedssektoren" fortalte de om:

- KASK Innovation – et fælles nordisk Interreg-projekt omkring 3 store sygehuses arbejde med innovative processer.

- Idéklinikker i Danmark og Norge – hvor medarbejdere kan få deres ideer analyseret, testet og bragt mod realisering i form af nye produkter eller en forbedret service.
- Innovationsmotoren i Sverige – hvor der er skabt en særlig metode til ideudvikling og hvor medarbejdere "trænes" i at få og viderebringe gode ideer.
- Udvikling af en særlig IKT-plattform til håndtering af kreative ideer i sundhedssektoren af Induct Software.

The Well-being workshop

The Clinic of Innovation received an idea about the premises at Oslo university hospitals cardiac medical ward. After detecting the needs, we got in touch with the pediatric wards and asked them to help us solve the "problem". We created a "Well-being workshop" where we visited the pediatric wards with painting equipment and prizes to the participants who made beautiful "heart art". In this way we light up the day for the children and produced art that can light up the day for Cardiac patients!

These paintings were made at the workshop.

Innovation indicators for Norwegian health care

The Innovation department at Oslo University Hospital is currently working on creating innovation indicators for Norwegian health care.

Mission: "Prepare proposal for a set of national indicators of innovation in health care. The proposal will assess the current indicators and to propose new indicators that cover the process and service innovation".

Why do we need innovation indicators?

Measurement efforts should focus not only on monitoring efficiency and costs, but also on providing a broad set of indicators that can shed light on innovation processes in public sector organisations and show how these can help governments meet their goals. Innovation is perceived as encompassing the generation, adoption and diffusion of new ideas.

Yesterday, the Innovation department was in the next to last meeting with the regional health organizations to discuss suggested indicators, which are to be submitted in a full 10 page report to the Norwegian Ministry of Health and Care Services on September the 30th!
